

For over a decade, the Institute for Health Metrics (IHM) has been an innovator in using real-world data (RWD) for healthcare research, including insightsDB™, a purpose built, HIPAA compliant, cloud data platform. IHM enables healthcare organizations to create better outcomes through the use of better data.

New clients and rapid growth are creating opportunities for us to add to our team. If you are looking for a challenging, fulfilling career at the leading edge of healthcare with a team of like-minded, passionate people, we should talk.

## Clinical Data Analyst

Location: Remote (US)  
Full or Part Time

We are seeking a clinical data analyst to join our company with a mission to advance health equity. Reporting to the Chief Medical Officer, the Clinical Data Analyst position includes, but is not limited to: data analysis and reporting, creating and updating data dictionaries, refining and adding to processes for data QA, as well as working with clients on data use, analysis, and creating reports. While this position requires working closely with other team members, we seek a self-motivated individual who also works effectively independently.

To be qualified for this position you will need:

- Experience working with Electronic Health Record data
- Familiarity with common standardized healthcare code systems like LOINC etc.
- Advanced Excel skills
- Proficiency in MS Word and PowerPoint
- Demonstrated analytic skills
- BA/BS degree or equivalent experience

You will set yourself apart with:

- Previous clinical experience, especially in a hospital setting
- SQL, SAS or similar experience
- Current HIPAA certification
- Experience with social determinants of health data
- Familiarity with common data models like OMOP

To apply for this position, send your cover letter and current resume to Anita Karcz, MD at [anita@healthmetrics.org](mailto:anita@healthmetrics.org)
